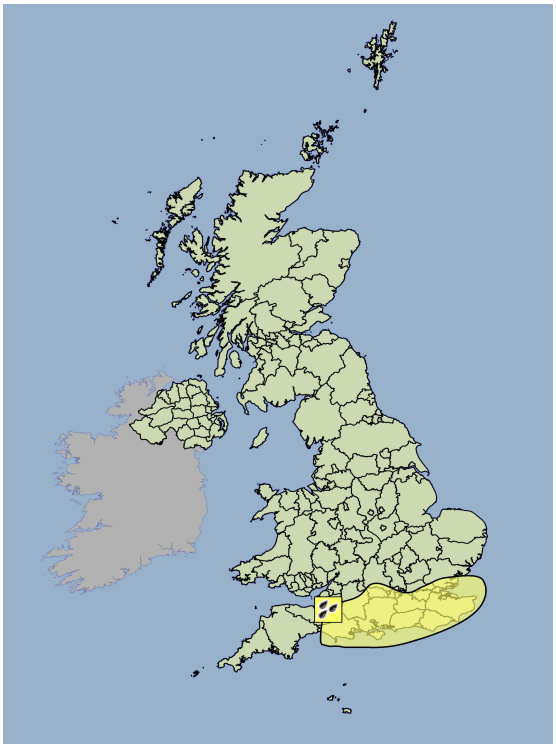
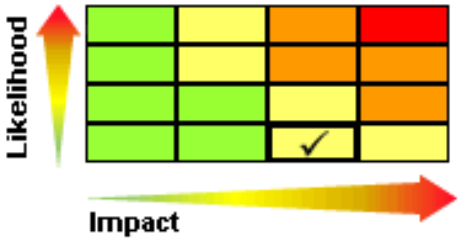
National Severe Weather Warning Service





Chief Forecasters Assessment
The band of heavy showers which crossed the south during Tuesday morning will be succeeded by more scattered showers, still with the odd heavy one. Rain is expected to return to parts of the region overnight but at present seems more likely to affect areas southeast of a line from the Isle of Wight to the Thames estuary. 10 to 20 mm of rain may fall in some parts of this area, with a lower risk that counties further to the northwest might also be affected.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **11:00 on Tue, 07th Jan 2014** until **06:00 on Wed, 08th Jan 2014**

Heavy showers will become less frequent for a time through Tuesday afternoon but more prolonged rain is likely to affect some southeastern counties of England overnight into the early hours of Wednesday.

This is an update of the warning first issued on Monday.

The public should be aware of the risk of further localised flooding, especially in areas which have been affected in recent days.
